

System Narrative

The proposed Document Tracking and Management System is a web-based system designed to help the City Mayor's Office (CMO) and its divisions manage documents faster and more efficiently. Instead of handling papers manually, staff can upload documents into the system, send them to the mayor for approval, and forward them to the correct division online. The system allows users to track the status of documents in real time, ensuring that everyone involved knows where the document is and what action is needed.

Once a document transaction is completed, the system stores a digital copy for easy retrieval in the future. Authorized users can search documents using keywords, dates, or categories, and they can print or download files when needed. The system also provides reports, user access control, and secure storage to improve organization, reduce delays, and support a paperless workflow.

Business Rules (Based on Entities)

1. Each document must be approved by one Mayor.
2. One Mayor can approve many documents.
3. One Administrator can manage many documents.
4. Each document belongs to one Administrator.
5. Each document has a unique transaction number for tracking.

Identified Business Entities:

- 1.Document
- 2.Mayor
- 3.Administrator
